

# COORDINATIVE DENTAL DIE INTERLOCKING SYSTEM

## ABSTRACT OF THE DISCLOSURE

A coordinative dental-die-interlocking system includes a dental-die pin (1) anchored in a tooth-die base (4) and inserted removably in a die-pin sleeve (2) that is anchored in a dental-model base (6). The dental-die pin includes a pin that lock-fits in the die-pin sleeve. The dental-die pin and the die-pin sleeve include predeterminedly color-coded identification marking. A plurality of sizes of die pairs (11, 12, 13) which are color-coded mate rigidly in a system of coordinative interlocking to prevent mismatching errors and to save time matching dental-die pins and die-pin sleeves by dental artisans.
